

ECG Anywhere

Compact and reliable

ECG Anywhere turns any iOS or Android device into a complete electrocardiograph. With just two terminals you are able to get a standard 12-lead ECG.

For clinicians this is unprecedented help in an emergency. In seconds you can turn your phone into an electrocardiograph and see in real time what is the patient condition.

If you are patient and suffer from any heart condition, the touch of a button lets you get your ECG and store it to be analyzed by your doctor. He will know the action to take.

We have created a device that we are proud of, with incredible cutting-edge technology and has exceeded the highest standards of testing, both electrical and safety and the most important, the clinical one. Our medical advisors are amazed and happy at the results obtained with such a incredible device.

Complete 12-lead real time Bluetooth ECG.

Channels: One, 12 leads (lead depends on electrodes placement)

CMRR: > 105dB

Resolution: 16 bit adaptive @ 500 sps

Digital filters: Power line (50/60Hz) and low-pass.

Heart rate accy: 3 bpm (MIT algorithm).

Storage: Unlimited

Compatibility: iPhone 4S, iPad 3 and above. Android 4.3 and above.

Power supply: User replaceable CR2032 coin cell type.

Warranty: 1 year limited warranty.
